Subject: CES: Suit Selection For Tomorrow to Move Material out of the building
Date: Wednesday, October 08, 2014 10:08:27 PM

Leroy:

Clearing Debris in Bldg:

- 1. Poly Coated Tyvek**
 - 2. Booties/gloves**
 - 3. Full Face APR w/appropriate cartridges or Air**
 - 4. Use of multirae to determine VOCs (MUC for APR is 50 ppm based upon Benzene).**
- Weston indicated that Phenol is a 1 to 1 so what you read on instrument you would assume is all phenol or all benzene.

Transfer of Materials into Vac Box

- 1. Barricade Suit with Tyvek beneath;**
- 2. Booties/Gloves**
- 3. Full Face APR w/Airline**

I do not want the Barricade suits used except during transfer operations. The debris removal operations should not result in contamination of the suit unless the personnel are careless. It would be a waste to use the Barricade Suits during situations when suit contamination is not really likely. I think this is reasonable.

Lets talk in the morning.

Thanks
